Best Practices and Lessons Learnt in Management of Low Birth Weight Infants in Kibogora District Hospital

Issues

■4.7% of live births < 2.5 kg (LBW) (2011-June 2014)

Before initiation of the neonatal services:

 Case fatality rate (CFR) among neonatal admissions was high (17.2% in 2011)

■ 7.7% of referrals.

Management of LBW Neonates

❖ Before 2012, neonates were admitted in maternity ward.

Gradual scale up of neonatal services since 2012:

***2012:**

- Separate room for neonatal admissions
- Initially staff of maternity ward assuring care
- Later 4 nurses and 1 MD fully appointed in neonatal services.
- Basic equipment
- ■Training in **MOH protocols**.

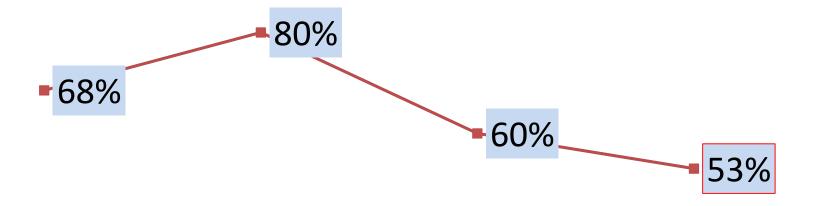

Management of LBW Neonates (con't)

*****2013:

- •Full time **mentoring** by a nurse specialized in neonatology
- Mentoring twice a year by a specialized pediatrician
- Upgrade of equipment according means/donations
- Reinforcement of Nutrition surveillance
- •Initiation of the **follow up of discharged** infants (5 visits during one year).
- **❖2014**: 6 nurses and 2 MD **fully appointed** in neonatal services.

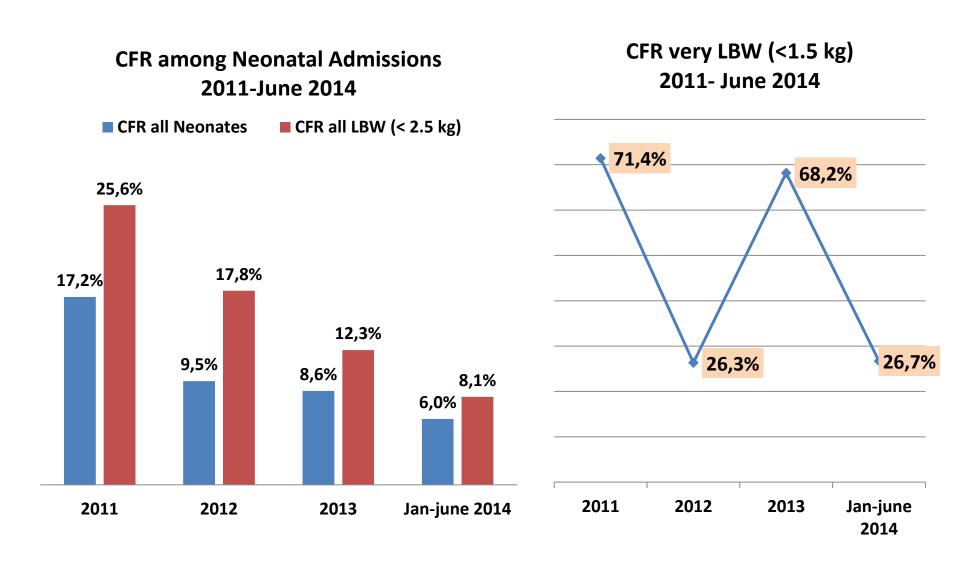

Results

Proportion LBW among all Neonatal deaths 2011- June 2014

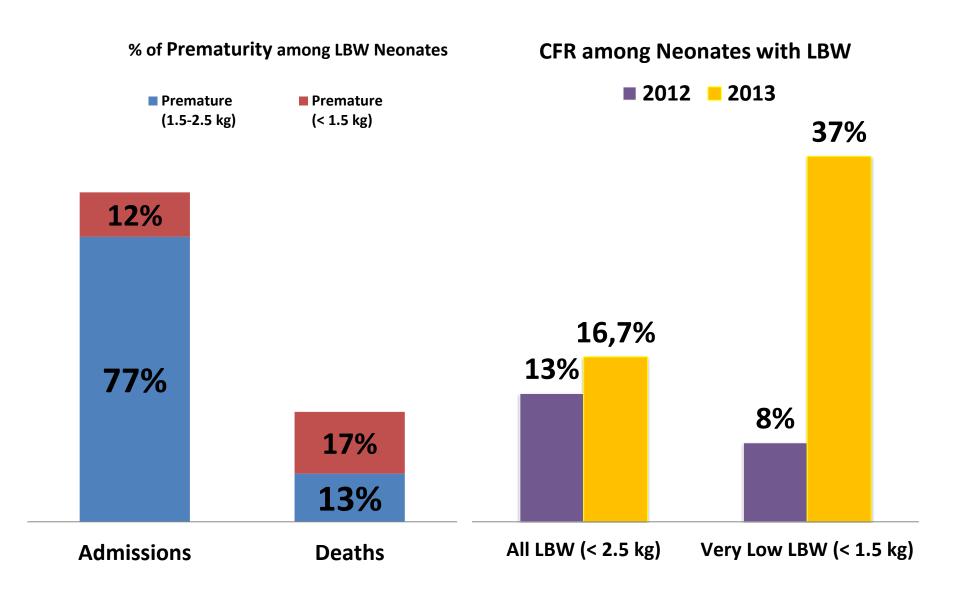

2011 2012 2013 Jan-june 2014

Neonatal CFR 2011- June 2014

Data collection among sample of 119 neonates with LBW (2012-2013)

Good practices in quality of care measured

100% of neonates got <u>daily medical surveillance</u> visits

 100% of neonates were monitored by nurses at least three times a day

 83% of neonates were <u>thermo regulated</u> by a combination of KMC and incubators

 92% of neonate's <u>nutritional treatment</u> were monitored.

Lessons learnt

Quality of care, provided by skilled health care providers in Kibogora rural district hospital, contributed to an important reduction of case fatality rates among neonatal admissions, including LBW Neonates/Prematures.

The management of very low birth weight neonates (< 1.5 kg) remains a challenge.

Training in MoH protocols and Mentoring by specialized staff are considered crucial to scale up the skills of the neonatal unit staff.

Next steps

Reinforce the follow-up system for discharged neonates

Reinforce community-based support by CHW's

Elaborate District Neonatal Health Plans, including prevention of LBW

 Initiate operational research in the area of neonatal health/LBW.
